

Cellular Infrastructure Shipments

Page 23851.29963

The Cellular Infrastructure Shipments report provides global and regional trend analysis for the following cellular types:

- **Indoor Distributed Antenna System (DAS):** A network of spatially separated antennas connected to a common source, used to enhance cellular coverage within buildings and indoor environments.
- **Macro Baseband:** The central processing unit within macro cell base stations that handles signal processing and traffic management for wide-area cellular coverage.
- **Small Cells:** Compact, low-power cellular radio access nodes deployed to improve network capacity and coverage in densely populated or hard-to-reach areas.
- **Cellular Towers:** Tall physical structures that support antennas and related equipment, enabling the transmission and reception of cellular signals over wide geographic areas.

Topics covered:

- [Accessing the Cellular Infrastructure Shipments Report](#)
- [Reviewing the Cellular Infrastructure Shipments Report](#)

Accessing the Cellular Infrastructure Shipments Report

Access the Cellular Infrastructure Shipments report via multiple tabs:

- From the Sectors & Insights tab, click **Media & Telecom** and then select "Cellular Infrastructure Shipments" from the left pane. For more information, refer to [Sectors & Insights](#).
- From the Company/Security tab, navigate to Sector Intelligence > Cellular Infrastructure Shipments. Enter a company identifier (such as FI4890US - United States / Real Estate Investment Trusts) in the Identifier box.
- From the Industry tab, navigate to Overviews > Cellular Infrastructure Shipments. Enter an industry identifier in the Identifier box.

Reviewing the Cellular Infrastructure Shipments Report

The Cellular Infrastructure Shipments report is divided into three tabs: the Summary tab, the Supply by Technology tab, and the Market Share tab. The Summary tab displays by default. Click the **Download All Metrics** button to export data to Microsoft Excel without graphics or the **Download** button to export data to Microsoft Excel with graphics.

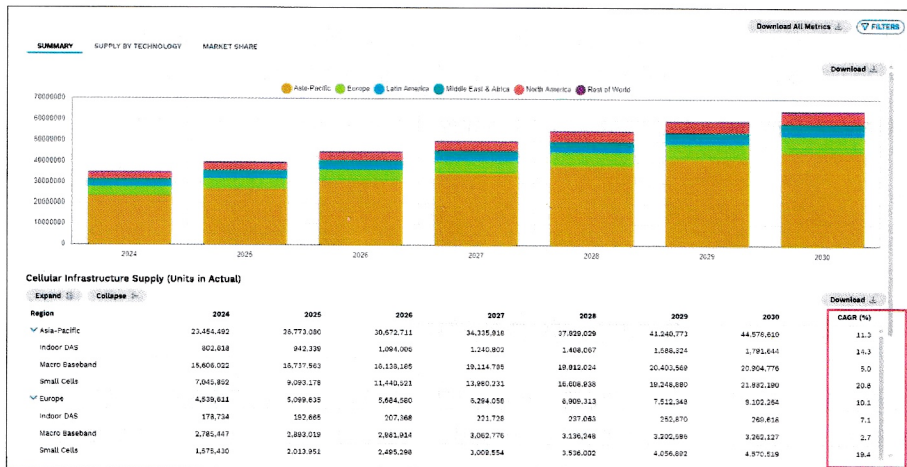

Tip Click the **Filters** button to refine the display. Filters vary by tab.

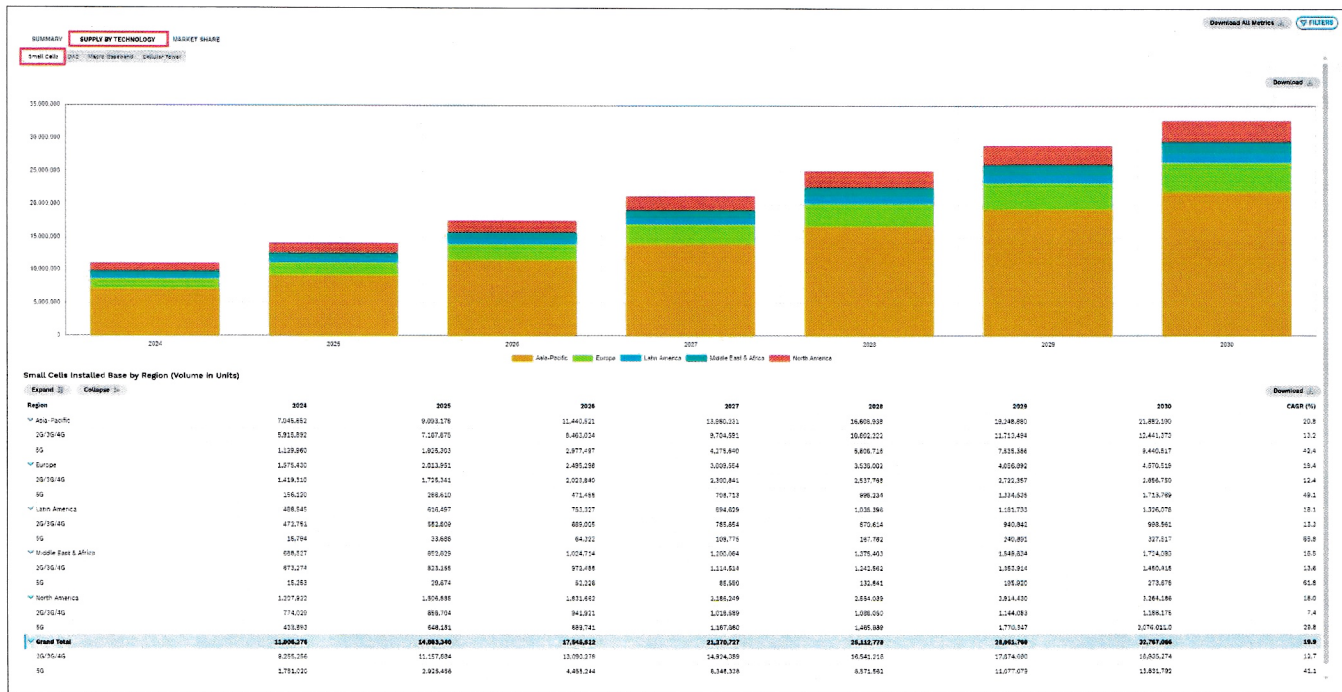

Note

The Compound Annual Growth Rate (CAGR) column in the Summary and Supply By Technology tabs displays the average annual growth rate for each component — indoor DAS, macro baseband, small cells, and cellular tower — over the selected forecast period.

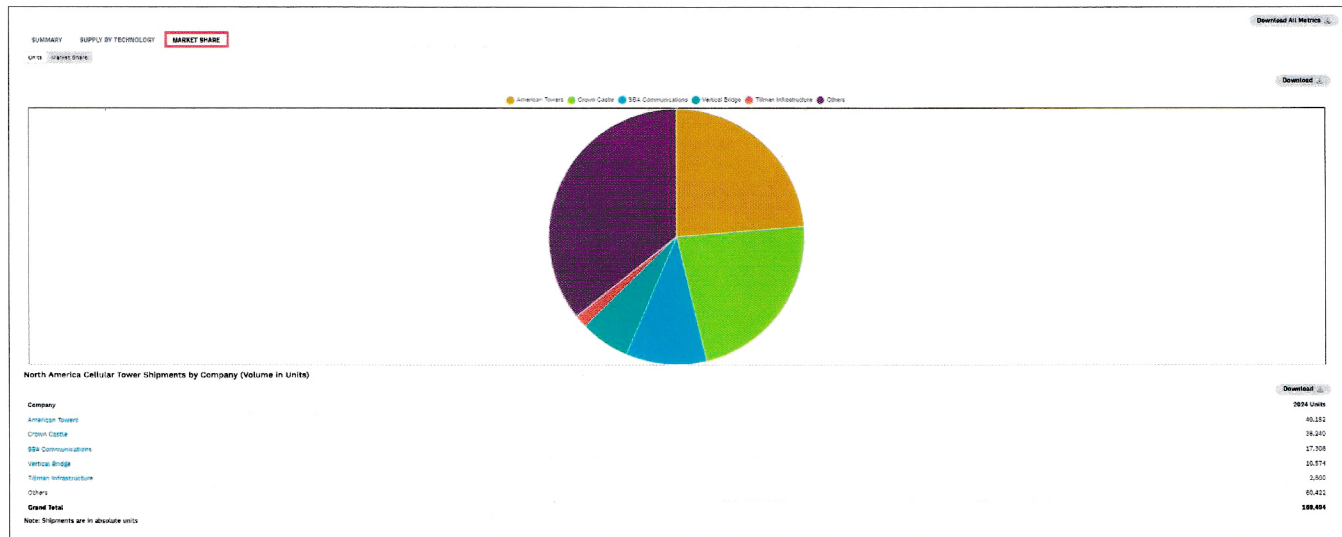

Use this data to assess the long-term growth potential and compare the performance of different technologies. The CAGR helps identify high-growth segments, such as Small Cells, and prioritize investments.

The **Supply by Technology** tab presents detailed tables segmented by technology type (2G/3G/4G/5G), enabling readers to analyze supply trends across different network components such as indoor DAS, macro baseband, small cells, and cellular towers. Small Cells is selected by default. Click another tab to review data for another cellular type.

The **Market Share** tab highlights the distribution of market share among vendors and technologies, helping stakeholders assess competitive positioning and identify growth opportunities.
